

Dear readers,

These days, DAASI International enjoys particularly successful partnerships and exciting projects.

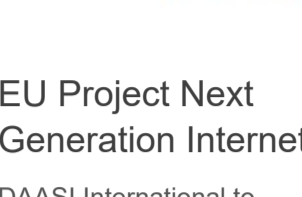

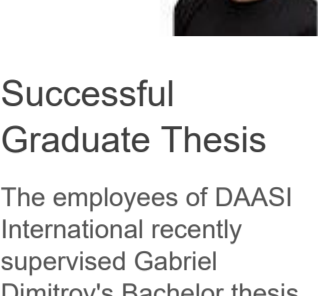

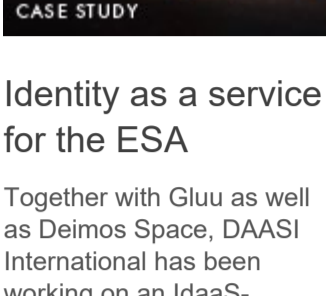

In the current edition of our newsletter, you can find out how DAASI International will help design the internet of tomorrow as an architect of the new generation Internet. You can also learn more about our IdM project for the European Space Agency (ESA) in the new case study and visit our digital trade fair booth at this year's it-sa - now in its new online format, called it-sa 365.

I hope you will find this to be an interesting and informative read.

Best,

Jennifer Vosseler
Head of Marketing bei DAASI International

	<p>Digital Sovereignty: OSBA Sets a Mark with Name Change</p> <p>Commentary by Peter Gietz, CEO DAASI International</p> <p>Digital sovereignty as a goal is steadily growing in importance: it means transparency and the prerogative of definition of personal digital data.</p> <p>Accordingly sovereign individuals, companies, and institutions are always in control of their own data, their actions online are determined by informed and conscious choices.</p> <p>This kind of sovereignty can only be realised if the appropriate framework is put in place. Unfortunately, this is not the case as of now, especially due to a few internationally operating companies, which collect digital data to commercially exploit them without allowing those concerned easy control over this utilisation.</p> <p>The Open Source Business Alliance takes an important stance on this subject matter with the addendum of "Federal Association for Digital Sovereignty" (<i>orig.: Bundesverband für digitale Souveränität e.V.</i>) to their name, which was decided on last year, and has recently been officially registered. This addendum emphasises their ambition to work even harder in the future to create appropriate framework conditions in politics, administration and business. DAASI International is a member of the OSBA and expressly supports this name extension.</p> <p>(Text about OSBA in German only)</p> <p>About the OSBA</p>

Did you know?

Since 2000 the EU has continuously placed more importance on open source. With the website <https://opensourceprojects.eu/>, they offer a public forum for exchange about and cooperation. Many of the solutions which have originated in this platform are already the standard solution in public institutions.

You miss being addressed personally?

DAASI International attaches great importance to the protection of your data. In our opinion this already begins with the principle of **data minimisation**. Therefore we deliberately refrain from asking for names or other personal data in the registration form for this newsletter. This only exception to this is your email address which is necessary in order for you to receive the newsletter. So please do not be surprised if we do not address you personally with your name at the beginning of the newsletter.
