Dear readers,

What a year it's been. Many of the not yet full 365 days taught us that today something can be over which had been considered permanent just one day prior. Hence, some rest and quiet during this Christmas time is well deserved.

With this last edition of our newsletter in 2022, we would like to give you a small update on ongoing and recent developments in regard to DAASI International, and seize the opportunity to wish you all wonderful holidays.

May you find the previously mentioned rest and quiet, and give your 2023 a great start with the right ingredients.

Heartfelt Christmas greetings

from the whole DAASI International team

News

Support for German Educational Institutions

Back in September of this year, the team of DAASI International worked on taking over several IdPs of small institutions of higher education in order to enable to continue their DFN-AAI membership.

Open Source Networking Day and New Board of OSBA

In November, the Open Source Business Alliance hosted their annual Open Source Day (OSD) in Berlin. DAASI International was there, and contributed to the event as gold sponsor. (German only)

More about the Open Source Day 22

midPoint 4.6 not Affected by OpenSSL Vulnerabilities

As midPoint generally doesn't use the OpenSSL library, the identity management system isn't affected. Yet there are certain configurations connected to potentially affected components. Evolveum compiled a small guide for you on what to do.

First Projects in Sovereign Tech Fund

With the the Sovereign Tech Fund the first seven open source projects are going to receive funding to develop independent and resilient software for infrastructure.

Once the initial pilot phase is completed, the funding will be expanded and more projects will be able to benefit from it.

Keycloak 20 Supersedes WildFly Distributions

The latest version of the popular identity provider tool completes the switch from WildFly to Quarkus at its core. This makes Keycloak cloud native, simpler, and more resourceful. However, the switch also complicates the migration to the new version as a new OpenJDK version is required. (German only)

More Information

Mastodon, part of the Fediverse, is a compilation of decentralised social platforms - and is becoming more popular. The still relatively young network for microblogging, as many know it from Twitter, might seem a bit intimidating at first due to its federated concept, we recommend, however this also makes it a beacon of data privacy, especially in comparison with traditional non-federated social media platforms. If you are interested in the network and are still looking for good company, come visit us at https://mastodon.social/@DAASI_International and give us a follow. ;-)

You miss being addressed personally?

DAASI International attaches great importance to the protection of your data. In our opinion this already begins with the principle of **data minimisation**. Therefore we deliberately refrain from asking for names or other personal data in the registration form for this newsletter. This only exception to this is your email address which is necessary in order for you to receive the newsletter. So please do not be surprised if we do not address you personally with your name at the beginning of the newsletter.
